

The people's verdict

The American people have spoken and their verdict is unmistakable. The midterm elections have delivered a stunning rebuke to President Donald Trump and his Republican Party. When leaders stop listening to their people, the ballot becomes their instrument of accountability. Trump appears to have learnt this lesson the hard way. An unprecedented war in Gaza, where Israeli violations continue to mock international appeals for peace.

money, national resources and security sacrificed for a distant war that does not serve their interests. The results amount to a powerful rejection of Trump's priorities and a warning that domestic concerns cannot be indefinitely overshadowed by foreign adventures.

The world now looks towards super power America for a change of course. Let Trump demonstrate the magnanimity expected of the world's most powerful nation by easing the

The new research era

The announcement that two leading AI companies, OpenAI and Anthropic, say their models have disproved the Exponential Time Hypothesis is a remarkable moment for science, but it is also a moment for caution. The hypothesis, about 25 years old, is a foundation for hundreds of studies in computer science and biology. If the claims hold, a good deal of existing research will need to be revisited. That is a hising organise an independent review. Science rightly waits for that verdict before celebrating.

Equally serious is the concern about a few technology giants controlling the tools of research. If breakthroughs depend on systems that only a handful of companies own, universities in countries like Pakistan risk becoming spectators. Our response should be practical. Our universities and the Higher Education Commission should strengthen the teaching of mathematics and theoretical computer science, so that our graduates can question and verify such results instead of merely accepting them. Curiosity and scepticism must grow together.
