TECHNICAL SPECIFICATIONS OF WECDIS SYSTEM

S #	Description	Firm's Reply (complied/partially/complies / not complied)																																																				
1.	WECDIS system shall be purchased and installed onbaord PN Ships. The specifications/ features of said system are appended in the ensuing paragraphs.																																																					
2.	<p>Navigation System Description</p> <p>The system shall be composed of the following equipment:</p> <p>a. Navigation workstations: Architecture based on Panel PC based on ECDIS certified 24 inch Panel PC running on windows 10/ 11, equipped with a calibrated color display and delivered with a restore key. The WECDIS software shall be installed and preconfigured on it. The Panel PC shall be equipped with serial and Ethernet ports which allows the connections to the external sensors and/ or to the navigation data network. The supplier shall provide Integrated or desktop keyboard with trackball provided to control the WECDIS software. 2 x work stations shall be installed on the vessel.</p> <p>b. Power supply: The supplier shall provide 1 x UPS for each navigation workstation to ensure uninterruptable power supply.</p> <p>c. External DVD player: The supplier shall provide external DVD player to import the electronic navigation charts on the WECDIS software.</p> <p>Software</p> <p>The WECDIS software shall comply with the latest IMO, IEC and IHO regulations and must have a type approval certificate. The Universal Polar Stereographic (UPS) coordinate system should use a metric based Cartesian grid laid out on a conformal projected surface. It should cover the Earth's polar regions, specifically the areas north of 84 °N and South of 80 °S.</p> <p><u>Route Planning and route monitoring</u></p> <p>The system shall provide route planning and route monitoring with dangers detection and dedicated channel view, pilot view and ETA view. Possibility to display the PIM planification on the route allowing a quick visualization of the vessel's progress on the route compared to the initial plan.</p> <p><u>Chenal view and predictive outline</u></p> <p>The system shall provide channeling view on the heading of the road segment followed and display a predictive outline on the rate of turn.</p> <p><u>Multi-fleet Management</u></p> <p>The system shall prevent collision risk, to know the position, route and speed of the other ships/ floating systems present around the own ship. The system shall also provide a Target fleet management function which allows multi fleet management, fleet in real time navigation data acquisition (AIS, ARPA, ROVs) creation of estimated targets fleet, display, focusing, configuration, consultation and anti-collision functions.</p> <p><u>Track management</u></p> <p>The system shall be capable of track management of vessels, track of the own ship and the targets, recording the course of the vessels with display of parameter profile (depth, speed, heading) the tracks shall be usable for the replay function. The system shall have capability to start or stop the track recording.</p> <p><u>Replay functionality</u></p> <p>The system shall have function to replay navigation data. It should also perform the real-life recorded tracks and data. The operator shall have</p>	

ability to select date and time of beginning of the replay and choose the replay speed. At any time, it should be possible to stop, resume or go back to a specific time.

MOB and SAR

The system shall also have ability of man overboard function as well as rescue at sea (SAR) function. The SAR function should be used for searches of all types of drifting boats while respecting the different ranking diagrams by square spiral, by sectors or by parallels.

Radar Overlay

The system shall have capability of radar overlay to correlate chart and radar image. The system shall offer following features for radar overlay:

- a. Several video radar filtering such as noise rejection & scan to scan filtering
- b. Selectable color palettes and reverse color modes
- c. Real-time full re/processing radar video data
- d. Configuration and selection of upto 5 radar sources
- e. ASTRIX CAT-240 & CAT-253 compatibility
- f. Interfacing with analogue radars

Tides with Admiralty Total Tide

The system shall be able to calculate and water level display functions based on reference harbours, predictive and / or real-time calculations, automatic correction of measured depths, displays of the tidal curve, display of tide gauges on the charts and selection of the reference harbor for the calculations.

Weather GRIB reader

The system shall acquire and display weather information (pressure, wind, wave, temperature) available from external sources (GRIB files).

3D Module

The system shall display 3D chart database to let the operating manager assess the situation in a new and more complete way. The navigator should have access to 3D geographic visualization of all data types: water surface, isolines, camera target, modules layer, legend, marks, areas, texts, routes, echoes, bathy data, sediments data and other mobiles.

Bathymetry Presentation

The system shall offer data interpolation function for seabed building with display properties (color, domain interpolation limit). The data used should be derived from bathymetric database, cartographic probes, probes recorded on user objects etc.

Submarine Bathymetry Profile

The system shall provide bathymetry profile to display profile history. Associated bathymetric alarms should be raised using an under-keel safety and/ or a safety contour value.

User Object Management

The system shall provide geo-referenced objects on the maps and

	<p>created by the user. Objects of types should mark geometric shapes lines, zones, sectors, texts, navigation areas. Creation, deletion, import/export classification, filtering, attached alarms, displays.</p> <p><u>Data Synchronization</u></p> <p>The system shall be able to synchronize data between several stations of distributed and centralized modes of synchronization. Data synchronization must be between several workstations (user objects, routes, ENC charts etc.) Each station should check whether changes have been done on the other stations, and if needed automatically duplicates changes in its own data. The synchronization configuration shall be applicable to multiple static workstations but also to a workstation-laptop configuration. In both cases, each system should have its own database that is synchronized with the other one(s).</p>	
7.	<p>The WECDIS system must support conduct of blind pilotage.</p>	
8.	<p><u>User right management</u></p> <p>The WECDIS system should allow administrators to assign permissions to each function according to the following groups of users:</p> <ol style="list-style-type: none"> a. Administrators b. Captains c. Navigators d. Guests 	
9.	<p><u>Backup/ Restore functionality</u></p> <p>Function for backing up and restoring user data program configuration or any for backing up and restoring the program configuration.</p>	
10.	<p><u>Modular Navigation Data Distribution Systems</u></p> <p>The supplier shall provide Navigation Data Distribution System (NDDS) that acquires controls and processes all navigation sensors data and distribute the consolidated navigation information to the external systems with low latency. NDDS shall be consistent common reference system which ensures that all parts of the system must run with the same navigation data.</p>	
11.	<p><u>Protection against Cyber attacks</u></p> <p>The NDDS should be capable of:</p> <ul style="list-style-type: none"> • Detecting and alerting anomaly on sensor data • Detecting and alerting anomaly on computer network • Use last standards in cyber recommendations • The system shall be of latest model/ recent make and not older than 1 year
